

MTH130

Name: _____

Practice Exam 1

Section: _____

This exam contains 5 pages (including this cover page) and 6 problems. Check to see if any pages are missing. Enter all requested information on the top of this page, and put your initials on the top of every page, in case the pages become separated.

You may *not* use your books, notes, or any calculator on this exam.

You are required to show your work on each problem on this exam. The following rules apply:

- **Organize your work**, in a reasonably neat and coherent way, in the space provided. Work scattered all over the page without a clear ordering will receive very little credit.
- **Mysterious or unsupported answers will not receive full credit.** A correct answer, unsupported by calculations, explanation, or algebraic work will receive no credit; an incorrect answer supported by substantially correct calculations and explanations might still receive partial credit.
- If you need more space, ask for an extra sheet of paper to continue the problem on; clearly indicate when you have done this.

Do not write in the table to the right.

Problem	Points	Score
1	6	
2	3	
3	5	
4	2	
5	4	
6	5	
Total:	25	

1. (6 points) Solve the following inequalities.

a) $(x - 1)(x + 2) > 0$

b) $\frac{x - 3}{x + 5} \leq 0$

c) $|x^2 + 1| \geq 0.$

2. (3 points) Find the equations for the lines given the information below.

a) The line with a slope of 5 and goes through the point $(2, 0)$.

b) The line that goes through the points $(2, 1)$ and $(3, 2)$.

3. (5 points) Consider the following quadratic

$$f(x) = x^2 - 4x + 7$$

- a) Put the quadratic function in “standard form”.

- b) Identify the shifts and then graph the quadratic on the axis below.

(a) shift up _____ units.

(b) shift down _____ units.

(c) shift right _____ units.

(d) shift left _____ units.

- c) Find all *axis* intercepts.

4. (2 points) Find the roots of the quadratic equation.

a) $f(x) = x^2 + x - 6$

b) $f(x) = 2x^2 - 3x - 2$

5. (4 points) Consider the following function $f(x) = \sqrt{x}$.

- a) Find the domain and range of the function from the graph.

- b) Sketch a graph of $f(x - 2) + 1$ on the axis below.

6. (5 points) Sketch a graph of the polynomial on the axis below.

$$f(x) = (x - 2)^2(x - 1)^4(x + 2)$$

- a) Identify the end behavior.
- b) Identify the zeros and multiplicities.
- c) Identify where the function is positive and negative.
